

Liftable self dumping bins with lifting points

Product information

The liftable self dumping bin is a practical and durable tool for handling construction waste. The container is equipped with four lifting points, ensuring stability during lifting. The container can be tipped when the front legs of the lifting chain sling are detached from the lifting points. It is suitable for handling various construction materials, such as sand, gravel, demolition waste, and other loose materials. The container can also be used with a forklift.
