

Anti-slip mats

Product information

Available in rolls or pieces. Protective anti-slip mat for transported goods. Its high coefficient of sliding friction - documented in testing according to VDI 2700 Sheet 14 (Draft) – provides outstanding anti-slip performance. Utilized widely in commercial transport applications, mats are also used successfully as intermediate layer pads in the packaging industry.

Recycled rubber crumbs bonded with Polyurethane.

Anti-slip mats are generally usable several times before they need to be replaced due to discard criteria.

- Fire resistance: Efl (B2) (EN 13501-1)
- Coefficient of Sliding friction: min. $\mu = 0.8$
- Elongation at break: min. 60% (DIN EN ISO 1798)
- Contact surfaces: wooden pallet, anti-slip textured lorry flooring (VDI 2700 Sheet 14)
- Pressure behavior: no plastic deformation after 24 hours strain. Ballast: grid box 1000 kg (VDI 2700 Sheet 15)
- Resistance: conditionally resistant to acids and bases
- UV-Resistance: resistant to DIN EN 1297 and DIN EN ISO 3386-2

Material: Recyclable rubber / polyurethane

Marking: According to standard

Temperature range: -30 °C - (+)100 °C

Finish: Color gray with grain texturing

Standard: EN 12195-2

Note: Sold in full rolls
