

MVK tensioning tool for plastic strap

Product information

The plastic strapping tensioning tools are suitable for tensioning, locking and cutting 13 and 16 mm PET and PP strapping. The locking method is a metal lock which the tool tightens around the strap. Tightening, locking and unlocking are all done with a single handle. Suitable for light to medium duty applications and in environments where there is a fire hazard. The machine is quick and easy to use and is the optimum choice for a wide range of applications where manual strapping is required.

Features: Strap thickness 0,4 - 1,0 mm

Material: Steel
