

Haklift safety harness kit

Product information

The safety harness package offers a comprehensive solution for working at height, including a 15 m safety rope with a rope grab and a shock absorber. The 15 m rope allows for a wide range of movement, which is essential in many working environments.

The safety harness is ideal for applications such as snow removal, property maintenance and various roofing work. The safety harness can be attached either to the anchorage point on the front of the harness or to the metal D-loop on the back. The size of the harness can be easily adjusted using the chest and thigh straps.

The harness is designed for users of sizes M-XL and is manufactured in accordance with EN 361:2002, which guarantees the reliability and safety of the product.
