

Movable cantilever rack 2-sided

Product information

The moveable 2-sided cantilever rack is designed for convenient and safe storage and transport of long items such as pipes and beams. The sturdy construction allows for stable operation. The shelf keeps materials organised and close to the work area. The uprights are equipped with top-down, layered cantilevers on both sides, which can be used for storing pieces. There are three layers per side, and the upper surface of the platform can be used for storage. The ends of the cantilevers have stop tabs to prevent the pieces from rotating and falling off the shelf. The shelf is equipped with Ø 150 mm PU wheels (two fixed and two turnable with integrated braking mechanism).

- **Total load capacity:** 2000 kg
- **Load capacity of cantilever pair:** 330 kg
- **Carrying capacity single cantilever:** 165 kg
- **Number of cantilevers:** 12
